

Acupuncturist in Timmins

Acupuncturist in Timmins - IV therapy or also known as Intravenous therapy is the placing of substances directly into a vein. IV therapy has been utilized in order to correct electrolyte imbalances and so as to deliver medications in blood transfusions. It can likewise be used as fluid replacement to correct, like for instance, dehydration. The intravenous route is the fastest way to deliver medications and fluids all through the body. Several medications, in addition to blood transfusions and lethal injections, can only be given intravenously.

Intravenous Vitamin C therapy is another remedy used for some medical conditions like for example cancer. Even if there is still controversy surrounding this particular form of remedy, many centers dedicate certain treatment regimens. Amongst the reputed effects of Vitamin C therapy include: increasing the quality of life and prolonging survival. Vitamin C is effective in preventing systemic free radical injury and corrects a lack of ascorbic acid, that is often found in cancer patients. Vitamin C inhibits hyaluronidase. This is an enzyme made by cancer cells that is responsible for the breakdown of healthy tissue, resulting in metastasis and tumor progression. Vitamin C even works synergistically conventional with different conventional cancer treatments.

Other names for Vitamin C, comprise: L-ascorbic acid or L-ascorbate. It is an essential nutrient for humans and different animals. It is a prime antioxidant and protects the body against stress due to oxidation. Vitamin C is likewise a co-factor in at least 8 enzymatic reactions consisting of different collagen synthesis reactions that cause the most severe signs of scurvy when they are not working properly. In animals, these enzyme reactions are extremely essential in preventing bleeding from wound-healing and capillaries.

Vitamin C Mega Dosage

There are a lot who truly advocate and endorse using Vitamin C, in excess of ten to one hundred times more than the RDI or Recommended Daily Intake. Supplements of Vitamin C could be taken orally or by intravenous therapy. There have yet to be randomized, large clinical trials on the effects of high doses performed on the general population. Linus Pauling spent a large part of his life supporting the use of mega doses of vitamin C. He believed the established RDA was sufficient in order to prevent scurvy but not necessarily a high enough dosage for optimal health.

A mega dose of Vitamin C continues to be and has been used to prevent and treat a lot of various conditions, some of which consist of coronary disease, the common cold and cancer. Current recommendations for Vitamin C are anywhere from 30 - 100 mg per day. Individuals taking a mega dose may ingest anywhere from 500mg to 1000 mg on a daily basis but the side effect of diarrhoea may be a common issue for individuals who ingest large amounts.
