

Ozone Therapy Timmins

Ozone Therapy Timmins - Lots of people believe ozone has excellent healing properties, whereas other individuals have argued that those claims are non-scientific and that ozone has no proven benefits. For years, there has been a lot of controversy and debate concerning this particular topic.

Recent clinical trials because of the arrival of precise medical ozone generators has enabled the mechanisms, actions, along with possible toxicity of ozone to be evaluated in clinical tests. Ozone has a capacity to oxidize organic compounds. When present in smog, ozone has different well-known toxic effects on the respiratory tract. Supporters of ozone therapy say it has many health benefits. The gas is made from medical grade oxygen and in medical use, is administered in precise therapeutic doses, never, never by means of inhalation.

The majority of US states disallow the advertising of ozone generators, clinical tests in ozone therapy and even research and its medical use. Therapeutic use of ozone is not endorsed by medical associations in any English speaking countries, or by whatever health authorities, thus, doctors who prescribe or administer ozone therapies risk losing their medical licenses. There is anecdotal proof of ozone therapy being beneficial and even causing remission in different sicknesses, although, only some of these life saving administrations have been verified and documented.

Historical Origins of Ozone Therapy

Soon following the discovery of ozone during 1856, it was used in health care to be able to disinfect operating rooms and to sterilize surgical instruments. The use of ozone to disinfect drinking water of viruses and bacteria was well established within mainland Europe by the end of the 19th century.

In the WWI, physicians took advantage of ozone's bacterial capacity, topically applying ozone on infected wounds. It was found that it had anti-inflammatory properties as well as hemodynamic properties while remedying the infection.

Evidence of Medical Benefits of Ozone Therapy

Marketers of the ozone generators have made some fantastic marketing claims, including that it is a cure utilized for nearly all diseases, including AIDS and cancer. These claims remain unsubstantiated. Much controversy surrounds ozone equipment and therapy itself. Critics claim that this alternative has given many people false hope and that it is hence somewhat dangerous.

Amongst the more modest claims suggest that the narrow use of ozone, injected into the synovial fluid and tissues that surround the bones and joints, and not into the blood vessels, may promote the body's own healing on musculoskeletal lesions, modest inflammation and tissue oxygenation.
